

# Diamond Crystal® Glacier Melt® Ice Melter

## Blended for speed and safety

Glacier Melt® ice melter contains a specially formulated blend of Magnesium and Sodium Chlorides for quick-start action.

- Works down to -10°F/-23°C
- More cost-effective than straight magnesium and calcium chlorides and melts at lower temperatures than sodium chloride (rock salt).
- Available in 50 lb. bags

### Directions for Use:

Remove slush and as much loose snow as possible before ice melter application. Spread Glacier Melt® ice melter evenly across surface area. Apply ½–1½ cups per square yard, depending on ice thickness and air temperature, as needed. Reapply as necessary. When ice and snow soften, remove slush and any excess ice melter from pavement for good concrete maintenance.

Product	Item Number/ Chep Item Number	Pallet Ct.	Pallet Pattern (tiers)	Pallet Dimensions	Product & Pallet Wt.	Package Cube	Package Dimension	Gross Wt.	GTIN individual (UPC)	GTIN pallet

A Brilliant Choice™

**Storage information:**

- Diamond Crystal® Glacier Melt® ice melter contains magnesium chloride, which is hygroscopic, thus easily pulls moisture from the air.
- Close and reseal container tightly to keep product dry, or place in a moisture-proof container
- Store in a dry place
- Always store ice melters out of reach of children and pets

**Contains:**

90% Salt (Sodium Chloride) CAS No. 7647-14-5

10% Magnesium Chloride Hexahydrate CAS No. 7791-18-6

**Precautions and Best Practices:**

Diamond Crystal® Glacier Melt® ice melter is not intended for human or animal consumption. If ingested, drink water. If discomfort occurs or persists, contact your doctor or veterinarian.

Diamond Crystal® Glacier Melt® blended ice melter may be used to remove snow and ice from concrete sidewalks, parking lots and asphalt surfaces. However, all ice-melting agents work by reducing the freezing point of water. This may result in more frequent freeze-thaw cycling of the melted snow and ice, which can cause surface scaling of concrete. As such, use only on properly placed, cured and sealed, air-entrained concrete. To lessen the possibility of freeze-thaw cycling and potential damage, promptly remove slush as it is formed. **DO NOT** use on porous or improperly cured concrete, concrete less than one year old, precast concrete items, masonry, mortar, wood or other porous materials. As with any ice-melting agent, particular care should be used when grass and vegetation are adjacent to the deicing surface as excess application may cause damage. Consumer uses this product at his/her own risk.
